* Look for clinical signs that could be the result of (1) FMD infection such as fever, lameness, piglet death, depression and/or vesicles/blisters on the feet and/or snout; (2) CSF infection such as fever, red/crusty eyes, unsteadiness, huddling, diarrhea, skin discoloration and/or death; (3) ASF infection such as fever, piling, tiredness, diarrhea, skin discoloration, abortion and death; (4) *Streptococcus equi* subspecies *zooepidemicus* infection such as lethargy, weakness, high fever, quick spread among pigs and rapidly escalating mortality. Contact manager/veterinarian if observe changes in production parameters or clinical signs of FMD, CSF, ASF or *Streptococcus equi* subspecies *zooepidemicus*.
