## $\frac{Coefficient\ of\ variation\ (C_{\underline{v}})\ for\ Repeatability\ for\ Electronic\ Optical\ Somatic\ Cell}{Counters.}$

COUNT	D	$\mathbf{D}^2$
$\Sigma_{\rm X} =$		

1. 
$$\Sigma x =$$
 Sum of the 10 counts

2. 
$$x = \underline{\hspace{1cm}}$$
 Mean (average) of the 10 counts

4. 
$$D^2$$
 Square of the Differences

5. 
$$\Sigma D^2 =$$
 Sum of Squares of Differences

6. 
$$n =$$
\_\_\_\_\_ Number of counts

7. 
$$S_{d} = \sqrt{\sum D^2/n-1} =$$
 Standard Deviation

8. 
$$C_v = S_d \cdot 100/x =$$
 Coefficient of Variation.

Note: Coefficient of Variation( $C_v$ ) must be (less than or equal to)  $\leq 5\%$ .
